

POWER-SPRAYS

PS8000 Pump Spray Machine

POWER-SPRAYS

PS8000 PUMP SPRAY STATION

The Power-Sprays PS8000 is the latest addition to the highly successful Power-Sprays range of pump/spray units.

Designed specifically to meet the demands of the Glass fibre Reinforced Concrete Industry, the PS8000 features a compact design and light weight.

Low level vibrated hopper and sieve

The materials holding hopper is just 80cms above floor level thus facilitating easy loading. The hopper is fitted with a pneumatic vibrator and sieve to filter out any lumps in the material, which can cause blockages at the spray gun.

Mobile

The pump rides on 4 low profile castors for easy mobility.

Pneumatic/Electrical control panel

The pneumatic and electric control panels are mounted alongside each other. The panel includes a remote control system, which enables the pump to be started/stopped from the spray gun's spray air control*.

All electrical design and components comply with British Standard and European safety standards.

Optional Equipment:

Spray heads: The PS8000 is designed to operate with the Power-Sprays Concentric and Lightweight Combination type GRC sprayheads. Other popular spray heads may also be used. Please check for exact compatibility requirements.

Roving Boom: A freestanding roving boom with glass fibre roving tray is available for use with the PS8000.

Materials hose and airlines: A choice of materials hoses and airlines are available. Please ask for details.

* All Power-Sprays GRC sprayheads are compatible with this feature. Please ask for further details.

For more detailed information and product specification, please contact your local agent or our UK based sales team.
